

Invasive Plant Species of Ontario

Can you create one of these invasive plant species from the materials provided in the room?

Using: fabric; paper; string; yarn; beads; pipe cleaners; glue; scissors; paint; or any number of other materials, try to recreate one of these plants!

Invasive Phragmites

Starry Stonewort

Eurasian Watermilfoil

You see invasive Phragmites all over the place in the Windsor/Essex/Lasalle/Amherstburg areas and all-over Southern Ontario. An aggressive plant, they create fire hazards all while crowding out native species of plants by releasing toxins into the soil to hinder and kill surrounding plants. They affect agriculture, cause road safety hazards and impact swimming; boating and angling activities.
